A sparkling journey to a brilliant future

Eurostar-Dimexon's
diamond cutting and
polishing centres:
Guangzhou, China (top)
and the centre in India
(below).

THE EUROSTAR-DIMEXON Group is celebrating its 25th anniversary of excellence in 2005. Eurostar-Dimexon grew steadily over the years from a single wholesaler in Antwerp, Belgium into a leading global diamond conglomerate: the company now controls 10 diamond cutting and polishing centres in Belgium, Botswana, China, and India, polishes over 4 million carats of top quality rough diamonds annually, and employs over 10,000 diamond experts worldwide.

A tour through Eurostar-Dimexon's cutting and polishing centre in the People's

Republic of China was not only fascinating, but literally eye-opening. With over 4,000 diamond professionals under the same roof, Eurostar-Dimexon China is possibly the world's largest diamond cutting and polishing centre – and certainly a beacon to everyone within the company. Eurostar-Dimexon China offers a complete array of employee support services, including dormitories, quality healthcare benefits, recreation, and continuous education and advancement possibilities.

It is a place where employees are encouraged to excel; it is also undoubtedly where tremendous value is being added to top quality diamonds and the level of craftsmanship, technology, co-operation, synergy, and opportunity that exists in this critical component of a much larger organisation is quintessentially amazing. In fact, Eurostar-Dimexon China sets a sparkling benchmark for quality and innovation throughout the entire group.

Eurostar-Dimexon is currently in the midst of extending this positive spirit of hope to Botswana.

At Eurostar-Dimexon's newest diamond cutting and polishing centre in Gaborone, Botswana, experts from Eurostar-Dimexon China were enlisted to jumpstart recruitment and management of local employees. Training of the first 100 employees is now well underway and the planned opening of the \$6 million diamond cutting and polishing centre is in March 2006.

Shining Quality

Due to its Just-in-Time precision manufacturing process, Eurostar-Dimexon has a running inventory of the industry's most extensive collection of diamonds ranging from 0.01-5 carats with a specialised focus on quality and craftsmanship. Volume or select quantities of diamonds in different categories are readily available, including ideal cut hearts and arrows diamonds, quality rounds, and fashionable fancies. And with the company's unique custom calibrated precision system and comprehensive bagging and fluting services, each diamond meets the client's individual requirements with respect to colour, clarity, technical cut, millimetre size, fluorescence, and shape for complete customer satisfaction.

Dazzling Technologies

It is not just any one factor alone that sets the company brilliantly apart. A combination of proprietary technologies that are developed by Eurostar-Dimexon's

in-house engineering team helps the company to create diamonds that are clearly unique. Advanced computer and laser technologies are used to ensure that these diamonds are meticulously manufactured to the industry's strictest standards.

Vibration free polishing wheels, specially developed angle-measuring devices, proportion scopes, binocular microscopes, spectroscopes, and electronic gauges all contribute to Eurostar-Dimexon's proprietary system, achieving precisely astonishing results according to individual client requirements. But above all is the level of dedicated service and commitment clients have come to expect from Eurostar-Dimexon.

Eurostar-Dimexon's commitment to quality, innovation, and customer care can be reflected in the company's solid legacy of success.

As a Sightholder of The Diamond Trading Company, Eurostar-Dimexon has a global turnover of over \$1 billion and an impressive partnership base including The Hearts On Fire Company, the prestigious Damiani, and an array of other global and national market leaders.

Clearly, Eurostar-Dimexon's professional standards and product integrity will continue to bring the company shining into the 21st century and beyond.
